Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/503,757

Applicant(s)

HOASHI ET AL.

Examiner

Hai V. Nguyen

Art Unit

2142

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 03 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 September 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-15 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-15 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. §§ 119 and 120

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.
- 13) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application) since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.
a) ☐ The translation of the foreign language provisional application has been received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121 since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____ 6) ☐ Other: _____

DETAILED ACTION

1. This Office Action is in response to the communication received on 09 September 2003.

2. Claims 1-15 are presented for examination.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102(e) that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

4. Claims 1-15 are rejected under 35 U.S.C. 102(e) as being anticipated by **Hughes** et al. (patent no. **US 6,065,055**).

5. As to claim 1, Hughes teaches the invention as claimed, including a method of automatic information filtering for identifying inappropriate information among various information provided through Internet and blocking presentation of identified inappropriate information, comprising the steps of:

entering an HTML (HyperText Markup Language) information provided through the Internet (Hughes, Abstract, col. 2, lines 30-51);

judging whether a URL (Uniform Resource Locator) of said HTML information entered from the Internet is a top page URL or not, the top page URL being a URL ending with a prescribed character string defined according to a URL hierarchical

Art Unit: 2142

structure by which each URL is constructed (Hughes, Fig. 18, col. 2, line 30 – col.5, line 21; col. 8, lines 44-50);

extracting words appearing in information indicated by the top page URL and carrying out an automatic filtering to judge whether said information indicated by the top page URL is inappropriate or not according to the words extracted from said information indicated by the top page URL, when said URL of said HTML information is the top page URL (Hughes, Fig. 18; col. 4, lines 50-67);

registering an upper level URL derived from the top page URL into an inappropriate upper level URL list (filter list) and blocking presentation of said information indicated by the top page URL, when said information indicated by the top page URL is judged as inappropriate by the automatic filtering, the upper level URL being derived from the top page URL by keeping a character string constituting the top page URL only up to a rightmost slash (Hughes, Figs. 16-18; col. 8, lines 17-50);

comparing said URL of said HTML information with each URL registered in the inappropriate upper level URL list and judging whether there is any matching URL in the inappropriate upper level URL list when said URL of said HTML information is not the top page URL, and blocking presentation of information indicated by said URL of said HTML information when there is a matching URL in the inappropriate upper level URL list, the matching URL being one upper level URL whose character string is contained in said URL of said HTML information (col. 10, line 40 – col. 11, line 27);

extracting words appearing in said information indicated by said URL of said HTML information, and carrying out the automatic filtering to judge whether said

Art Unit: 2142

information indicated by said URL of said HTML information is inappropriate or not according to the words extracted from said information indicated by said URL of said HTML information, when there is no matching URL in the inappropriate upper level URL list (Hughes, cols. 4-5; lines 50-21); and

blocking presentation of said information indicated by said URL of said HTML information when said information indicated by said URL of said HTML information is judged as inappropriate by the automatic filtering (Hughes, col. 8, line 8 – col. 9, line 34; col. 10, line 40 – col. 11, line 64).

6. As to claim 2, Hughes teaches, further comprising the steps of registering in advance URLs that provide inappropriate information in an inappropriate URL list (Hughes, Fig. 18); and

carrying out a third part rating based filtering for comparing said URL of said HTML information with each URL registered in the inappropriate URL list and judging whether there is any matching URL in the inappropriate URL list, and blocking presentation of said information indicated by said URL of said HTML information when there is a matching URL in the inappropriate URL list (Hughes, Figs. 1-23; col. 8, line 8 – col. 9, line 34; col. 10, line 40 – col. 11, line 64).

7. Claim 3 recites an apparatus corresponding to the method of operations of claim 1. The apparatus claim is read in that it simply follows the logical implementation of the method of operations indicated in the referenced claims to perform each of logical steps of controlling inappropriate material access in internet access that results from the reference discussed above regarding the claim to the method of operations. Thus, the

Art Unit: 2142

apparatus described in claim 3 would have been obvious in view of the elements provided in the reference, which correspond to the steps in the method of operations for the same reasons discussed above regarding claim 1.

8. Claim 4 is corresponding apparatus claim of claim 2; therefore, it is rejected under the same rationale.

9. Claim 5 is corresponding computer readable medium claim of claim 1; therefore, it is rejected under the same rationale.

10. Claim 6 is corresponding computer readable medium claim of claim 2; therefore, it is rejected under the same rationale.

11. As to claim 7, Hughes teaches a method of automatic information filtering for identifying inappropriate information among various information provided through Internet and blocking presentation of identified inappropriate information, comprising the steps of:

obtaining word weights of words to be used in judging whether presentation of each information should be blocked or not according to words contained in each information, by an automatic learning using learning data containing inappropriate information whose presentation should be blocked and appropriate information whose presentation should not be blocked (Hughes, the method and system explained in Figs. 1-23 operates in conjunction with a filter list. According to another embodiment, the present invention comprises a method and system of creating a filter list, col. 11, lines 20-64);

Art Unit: 2142

storing and managing the word weights in correspondence to respective words in a form of a weighted word list (filter list) (Hughes, Figs. 24-25; items 244, 254; col. 11, line 28 – col. 12, line 17);

extracting words contained in information entered from the Internet (Hughes, col. 4, lines 50-67); and

reading out the word weight for each word extracted from said information, from the weighted word list, calculating a total sum of the word weights of the words extracted from said information, and judging whether or not presentation of said information should be blocked or not according to the total sum (Hughes, Fig. 18; col. 10, line 40 – col. 11, line 27).

12. As to claim 8, Hughes teaches, wherein the automatic learning is based on a linear discrimination function that can discriminate the inappropriate information and the appropriate information on a vector space (Hughes, col. 4, line 50 – col. 5, line 21; col. 10, line 40 – col. 11, line 54).

13. Claim 9 is corresponding method claim of claim 2; therefore, it is rejected under the same rationale.

14. Claim 10 recites an apparatus corresponding to the method of operations of claim 7. The apparatus claim is anticipated in that it simply follows the logical implementation of the method of operations indicated in the referenced claims to perform each of logical steps of controlling inappropriate material access in internet access that results from the reference discussed above regarding the claim to the method of operations. Thus, the apparatus described in claim 10 would have been read

Art Unit: 2142

in view of the elements provided in the reference, which correspond to the steps in the method of operations for the same reasons discussed above regarding claim 7.

15. Claims 11-12 are corresponding apparatus claims of claims 8-9; therefore, they are rejected under the same rationale.

16. Claims 13-15 are corresponding computer readable medium claims of claims 7-9; therefore, they are rejected under the same rationale.

Response to Arguments

17. Applicant's arguments filed on 09 September 2003 have been fully considered but they are not persuasive.

18. In the remark, Applicant argued in substance that

(A) The prior art fails to disclose “any teaching for the use of upper level URL derived from the top page URLs indicating inappropriate information, or the use of the automatic filtering based on words extracted from the information (page) indicated by the URL” in claims 1, 3, 5, 7, 10, 13.

As to the point (A), Hughes teaches that “the final method of managing inappropriate material is “Content Filtering”. This involves scanning the actual material (not the URL) inbound to a network from the Internet. Words lists and phrase pattern matching techniques are used to determine if the material is inappropriate or not. This process requires a great deal of computer processor time and power, slowing down Internet access and also making this is very expensive alternative.” (Hughes, col. 2, lines 17-26).

Art Unit: 2142

Therefore, it would have been obvious to one of ordinary skill in the networking art to conclude that “the use of automatic filtering based on words extracted from the information (page) indicated by the URL” is well known feature in the networking art. As a matter of facts, **Russell-Falla** et al. (US patent no. **6,266,664 B1**) discloses that the present invention is enabling parents or guardians to exercise some control over the web page content displayed to their children, providing for automatic screening of web pages or other digital content, providing for automatic blocking of web pages that likely include pornographic or other offensive content, characterizing a specific category of information content by example, and then to efficiently and accurately identify instances of that category within a real-time datastream, and to support filtering, classifying, tracking, and other applications based on real-time identification of instances of particular categories of content with or without displaying that content (Russell-Falla, col. 2, line 39 – col. 4, line 23).

Secondly, it would have been obvious to one of ordinary skill in the networking art to conclude that “the use of the upper level URL derived from the top page URLs indicating inappropriate information” is also well known feature in the networking art. As a matter of facts, **Humes** (US patent no. **5,996,011**) discloses that “the request is sequentially filtered at three different levels, if necessary. First, the URL requested is filtered to determine if the web page associated with that URL has been pre-approved or pre-denied. If the URL has not been pre-approved or pre-denied, the header of the web page is then filtered to determine if the web page contains text data (such as HTML). If so, the body of the web page is filtered. While the filter will decide whether or

Art Unit: 2142

not to block access to the entire web page based on the URL, depending on its processing of the body of the web page, the filter may deny access completely to the web page, deny access to certain portions of the web page (i.e., filter some objectionable words), or allow complete access to the web page. (Humes, col. 2, line 30 – col. 4, line 27).

Prior Art Of Record

19. The prior art made of record and relied upon is considered pertinent to applicant's disclosure.

Klensin et al. (US patent no. 6,564,327 B1), Moshfeghi (US patent no. 6,476,833 B1), Russell-Falla et al. (US patent no. 6,266,664 B1), Humes (US patent no. 5,996,011) are related networking art for implementing controlling internet access and the content access control.

20. Further references of interest are cited on Form PTO-892, which is an attachment to this action.

Art Unit: 2142

21. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hai V. Nguyen whose telephone number is 703-306-0276. The examiner can normally be reached on 8:00-4:30 Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wiley can be reached on 703-308-5221. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-3800/4700.

Art Unit: 2142

Any response to this final action should be mailed to:

Box AF

Commissioner of Patents and Trademarks

Washington, D.C. 20131

or faxed to:

(703) 872-9306, (for **formal communications**; please mark
"EXPEDITE PROCEDURE").

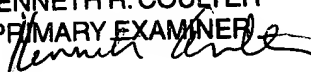

or:

(703) 746-7240 (for **informal or draft communications**, please
label "PROPOSED " or "DRAFT").

Or:

(703) 746-7238 (for After Final communications).

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal
Drive, Arlington, VA. 22202, Sixth Floor (Receptionist).
